

Adding a TX to Digi "Stand Alone" E-Key RX

- Connect the "LEARN" link on the RX, the LED will flash once.
- Remove the "LEARN" link immediately* and the LED will light solidly.
- Within the next 30 seconds press the required button on the TX, the LED will go off.
- Press the same button on the TX again, the LED will flash repeatedly for two seconds indicating that the code has been learnt.
- The RX will now respond to that TX button.
- Remember that the RX can remember 33 codes, if more than 33 are entered the last code will always be replaced.

* If the link is left connected it will erase all codes
